Self-taught automation engineer who replaces repetitive manual work with scheduled, self-reporting scripts. I reverse-engineer the API or automate the UI, add logging and alerts, and hand over something you can run yourself. Recent work: **112 automated cycles in 24h with 0 failed batches**, **40 sources classified per run with 0 duplicates**, and a document chatbot whose answers stay grounded in your own files. I build the test that proves it works before you pay for it.

SELECTED WORK

Automation Bot — browser game API — **Python · REST · cron**

Solo build · 2026

- Reverse-engineered the game's private API and wallet-signature login, replacing manual clicking with a scheduled loop (harvest, replant, water, craft, sell, auto-upgrade).
- Ran **112 cycles in one day with 0 failed batches**; every action logged, failures alerted to Telegram.
- Added safety rules: never spend below a token floor, never sell reserved stock, stop on session takeover.

Screening Pipeline — data triage — **Python · SQLite · regex**

Solo build · 2026

- Scrapes public sources without login, resolves shortlinks, fetches each landing page, scores every item, and stores only what is new.
- **40 items classified per run, 0 duplicate inserts** (composite-key dedupe); silent by design — reports only when something is worth acting on.
- Rule-based classifier with red-flag detection (deposit / KYC / presale) that overrides the source text when the page disagrees.

Auto-Apply Bot · AI Document Chatbot — **Python · SMTP · Streamlit**

Solo build · 2026 · github.com/Lilulil/docai-chatbot

- Auto-Apply: reads vacancies from Excel and sends tailored applications with rate limiting — **12 applications from 33 vacancies** per run.
- Doc chatbot: upload PDF/TXT/DOCX and ask questions; answers grounded via retrieval (Streamlit + vector search), WhatsApp version in n8n.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, HTML/CSS, Solidity (basics)
- **Automation:** Playwright, PyAutoGUI, OpenCV, cron, REST/JSON APIs, reverse-engineering web apps
- **Data:** SQLite, pandas, Excel, scraping and dedupe pipelines
- **AI:** Claude/[OI] API, RAG, vector search (Qdrant/FAISS), n8n orchestration
- **Web3:** EVM RPC, ethers.js/web3.py, wallet signatures, contract read/preview flows
- **Ops:** Git/GitHub, Linux VPS, systemd/tmux, WordPress, technical documentation

EXPERIENCE

E-commerce Operations — Luna Lumina — **2024 – 2025**

Store operations, listing optimisation, customer service (English)

- Grew monthly sales from **$250 to $3,000+** through listing quality, pricing tests and faster response times.

CERTIFICATIONS

Frontend Web Development · Artificial Intelligence Specialization · WordPress Development · Website Development Fundamental — MySkill (2025) · Multimedia Production — BLKK Semarang (2021)

AVAILABILITY

Freelance and remote, worldwide · English (professional) · Indonesian (native) · Response within a few hours on WhatsApp · Fixed scope, 50% upfront, 1 free revision.
